

ABSTRACT

AN ANDROID BASE E-LEARNING OF LAMPUNG ART'S ELEMENTS

By

Salviansah Novendi NPM: 1511010046

Art is a human idea expressed through specific patterns of behaviour to produce beautiful and meaningful works in the form of art. Art prorates into knowledge, ideas, and values that exist in the human mind. Art is a form of human work that has beauty and allows others to enjoy it.

Learning using e-learning can help students to get information at the fine arts learning stage because it supports space less and time difference using a mobile device. This app was built using Java programming language and Android Studio. Application testing was tested by using the Black Box method that underlines the functional requirements of the software and finds functional errors in the software.

The result of the research was that the application acts as an alternative for studying art materially, although the teachers and their students were not in the same room, they could interact in the form of text in real-time.

Keywords: Android, E-Learning, Arts, Mural and Painting
