## 🔍 SEO

---

✔ WWW Resolved Perfect, WWW is Resolving.

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.

✔ Ip Canonicalization Yes

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.

⊖ Robots.txt Missing

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.

! Sitemap No

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.

✔ Title Portal Resmi Pemerintah Kota Bandar Lampung  
Length: 43 Character(s)

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

	H1	H2	H3	H4	H5	H6
 Heading Tags  	0	12	0	0	0	0
	<a href="#">View more</a>					

Heading Tags are used in order to provide your visitors with a clear view about the content's importance.

 Image  	We have found total 14 Image alt attribute for 14 image(s) is missing. <a href="#">View more</a>
--	--

Alternative text describes your images so they can appear in Google™ Images search results also be cached by the Search Engine bot as they cannot read images.

 Text to HTML   	1.28%
---	-------

The text and HTML ratio of your website should be ideally 25 to 75 percent.

 Flash   	No
--	----

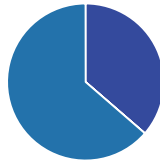

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

 Iframe  	No
---	----

Avoid frames whenever possible and use a NoFrame tags if you must use them.

We found a total of 11 link(s)

### Page Links

External Links: doFollow (36.36%)

External Links: noFollow (0.00%)

Internal Links : (63.64%)

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

### Favicon

Missing

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

### Print CSS

No

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

### Open Graph

No

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

### W3C Validation

No

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

SSL Enabled

Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

## 🔍 SEO

---

✔️ WWW Resolved  Perfect, WWW is Resolving.

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.

✔️ Ip Canonicalization  Yes

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.

✔️ Robots.txt  <https://mesujikab.go.id/robots.txt>

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.

✔️ Sitemap  <https://mesujikab.go.id/wp-sitemap.xml>

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.

✔️ Title  **Pemerintah Kabupaten Mesuji – Bumi Ragab Begawe Caram**  
**Length: 53 Character(s)**

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

	H1	H2	H3	H4	H5	H6
 <b>Heading Tags</b>  	0	0	0	0	0	0
	<a href="#">View more</a>					

Heading Tags are used in order to provide your visitors with a clear view about the content's importance.

 <b>Image</b>  	<p>We have found total 31 Image alt attribute for 31 image(s) is missing. <a href="#">View more</a></p>
---	---

Alternative text describes your images so they can appear in Google™ Images search results also be cached by the Search Engine bot as they cannot read images.

 <b>Text to HTML</b>   	6.65%
--	-------

The text and HTML ratio of your website should be ideally 25 to 75 percent.

 <b>Flash</b>   	No
---	----

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

 <b>Iframe</b>  	No
--	----

Avoid frames whenever possible and use a NoFrame tags if you must use them.

We found a total of 160 link(s)

 Page Links  
 

External Links: doFollow (82.50%)   
External Links: noFollow (0.00%)   
Internal Links : (17.50%) 

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

 Favicon   Favicon Found

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

 Print CSS  No

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

 Open Graph   No

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

 W3C Validation    No

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

SSL Enabled

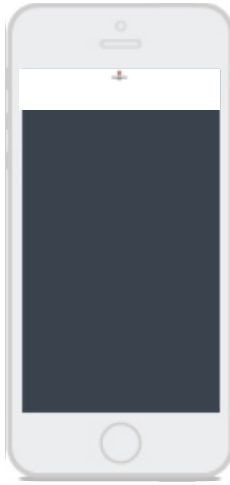

Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

## SEO

✓ WWW Resolved  Perfect, WWW is Resolving.

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.

✓ Ip Canonicalization  Yes

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.

✓ Robots.txt  <https://metrokota.go.id/robots.txt>

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.

✓ Sitemap  [https://metrokota.go.id/sitemap\\_index.xml](https://metrokota.go.id/sitemap_index.xml)

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.

✓ Title  METRO CERIA - PORTAL  
**Length:** 20 Character(s)

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

	H1	H2	H3	H4	H5	H6
 Heading Tags  	6	12	63	0	2	0
	<a href="#">View more</a>					

Heading Tags are used in order to provide your visitors with a clear view about the content's importance.

 Image  	We have found total 57 Image alt attribute for 21 image(s) is missing. <a href="#">View more</a>
--	--

Alternative text describes your images so they can appear in Google™ Images search results also be cached by the Search Engine bot as they cannot read images.

 Text to HTML   	1.84%
---	-------

The text and HTML ratio of your website should be ideally 25 to 75 percent.

 Flash   	No
--	----

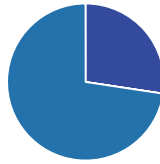

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

 Iframe  	Yes
---	-----

Avoid frames whenever possible and use a NoFrame tags if you must use them.

We found a total of 168 link(s)

### Page Links

External Links: doFollow (27.38%)

External Links: noFollow (0.00%)

Internal Links : (72.62%)

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

### Favicon

Favicon Found

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

### Print CSS

No

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

### Open Graph

Yes

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

### W3C Validation

No

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

SSL Enabled

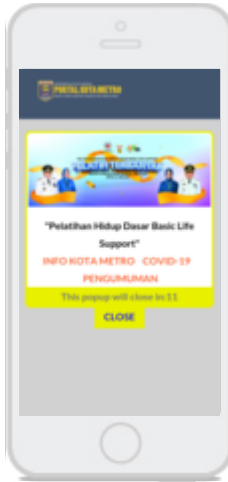

Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

## SEO

✔ **WWW Resolved** ⚙️⚙️⚙️ Perfect, WWW is Resolving.

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.

✔ **Ip Canonicalization** ⚙️⚙️ Yes

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.

✔ **Robots.txt** ⚙️ <https://pesawarankab.go.id/robots.txt>

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.

! **Sitemap** ⚙️ No

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.

! **Title** ⚙️⚙️ Portal Informasi Resmi Kabupaten Pesawaran – Portal Informasi Resmi Kabupaten Pesawaran  
**Length:** 87 Character(s)

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

	H1	H2	H3	H4	H5	H6
 <b>Heading Tags</b>  	1	1	15	0	0	11
	<a href="#">View more</a>					

Heading Tags are used in order to provide your visitors with a clear view about the content's importance.

 <b>Image</b>  	<p>We have found total 19 Image alt attribute for 11 image(s) is missing. <a href="#">View more</a></p>
---	---

Alternative text describes your images so they can appear in Google™ Images search results also be cached by the Search Engine bot as they cannot read images.

 <b>Text to HTML</b>   	2.91%
--	-------

The text and HTML ratio of your website should be ideally 25 to 75 percent.

 <b>Flash</b>   	No
---	----

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

 <b>Iframe</b>  	Yes
--	-----

Avoid frames whenever possible and use a NoFrame tags if you must use them.

We found a total of 108 link(s)

### Page Links

External Links: doFollow (4.63%)

External Links: noFollow (0.00%)

Internal Links : (95.37%)

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

### Favicon

Favicon Found

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

### Print CSS

No

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

### Open Graph

No

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

### W3C Validation

No

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

SSL Enabled

Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

⊖ W3C Validation No

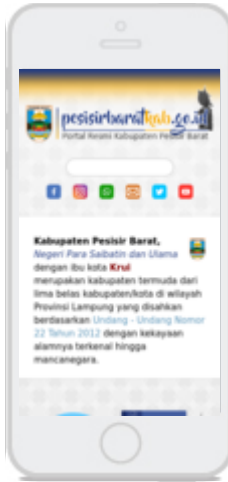

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

✔ SSL Enabled Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

## 🔍 SEO

---

- ❌ **WWW Resolved** ⚙️ ⚙️ ⚙️ **Warning! WWW Redirection.**

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.
- ✅ **Ip Canonicalization** ⚙️ ⚙️ **Yes**

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.
- ✅ **Robots.txt** ⚙️ **<https://pringsewukab.go.id/robots.txt>**

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.
- ✅ **Sitemap** ⚙️ **<https://pringsewukab.go.id/sitemap.xml>**

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.
- ✅ **Google Preview** ⚙️ ⚙️ **[Kabupaten Pringsewu](https://pringsewukab.go.id/)  
<https://pringsewukab.go.id/>  
Kabupaten Pringsewu**

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

✔ Title  Kabupaten Pringsewu  
**Length:** 19 Character(s)

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

✔ Meta Description  Kabupaten Pringsewu  
**Length:** 19 Character(s)

Description tag is one of the most important elements shown to the users for the typed query. The Meta description is presented as a snippet of your content. It tells your potential visitors what kind of information they can find on your web page.

✔ Meta Keywords  Kabupaten Pringsewu, Kabupaten Pringsewu  
**Length:** 2 Keyword(s)

Meta keywords are used to indicate keywords that are relevant to your website's content. Meta keywords aren't used by Search Engines to determine web page's relevance for the query.

✔ Heading Tags 

H1	H2	H3	H4	H5	H6
0	0	0	1	0	0

[View more](#)

Heading Tags are used in order to provide your visitors with a clear view about the content's importance.

! Image  We have found total 10 Image alt attribute for 7 image(s) is missing. [View more](#)

Alternative text describes your images so they can appear in Google™ Images search results also be cached by the Search Engine bot as they cannot read images.

✘ Text to HTML  12.83%

The text and HTML ratio of your website should be ideally 25 to 75 percent.

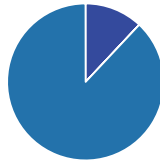

✔ Flash  No

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

✔ Iframe  No

Avoid frames whenever possible and use a NoFrame tags if you must use them.

We found a total of 50 link(s)

✔ Page Links 

External Links: doFollow (12.00%)   
External Links: noFollow (0.00%)   
Internal Links : (88.00%) 

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

✔ Favicon   Favicon Found

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

! Print CSS  No

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

✘ Open Graph  No

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

 W3C Validation No  

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

 SSL Enabled Yes  

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

✘ **Text to HTML**    1.33%

The text and HTML ratio of your website should be ideally 25 to 75 percent.

✔ **Flash**    No

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

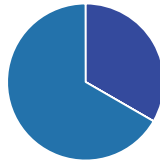

✔ **Iframe**   No

Avoid frames whenever possible and use a NoFrame tags if you must use them.

We found a total of 3 link(s)

### Page Links

External Links: doFollow (33.33%)

External Links: noFollow (0.00%)

Internal Links : (66.67%)

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

### Favicon

Favicon Found

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

### Print CSS

No

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

### Open Graph

No

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

### W3C Validation

No

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

SSL Enabled

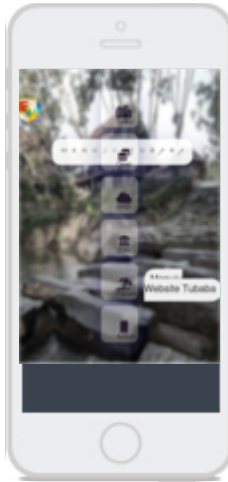

Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

❌ **WWW Resolved** Warning! WWW Redirection.  
⚙️ ⚙️ ⚙️

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.

✅ **Ip Canonicalization** Yes  
⚙️ ⚙️

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.

✅ **Robots.txt** HTTP://tulangbawangkab.go.id/robots.txt  
⚙️

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.

⚠️ **Sitemap** No  
⚙️

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.

**Google Preview**  

[Portal | Website Kabupaten Tulang Bawang](http://tulangbawangkab.go.id/)  
[HTTP://tulangbawangkab.go.id/](http://tulangbawangkab.go.id/)  
 Kabupaten Tulang Bawang adalah salah satu kabupaten di Provinsi Lampung, Indonesia dengan ibu kotanya adalah Kota Menggala.

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

**Title**  

 Portal | Website Kabupaten Tulang Bawang  
**Length:** 40 Character(s)

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

**Meta Description**  

 Kabupaten Tulang Bawang adalah salah satu kabupaten di Provinsi Lampung, Indonesia dengan ibu kotanya adalah Kota Menggala.  
**Length:** 123 Character(s)

Description tag is one of the most important elements shown to the users for the typed query. The Meta description is presented as a snippet of your content. It tells your potential visitors what kind of information they can find on your web page.

**Heading Tags**  

H1	H2	H3	H4	H5	H6
61	0	4	0	0	61

## SEO

-  **WWW Resolved**    **Warning! WWW Redirection.**

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.
-  **Ip Canonicalization**   **Yes**

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.
-  **Robots.txt**  **Missing**

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.
-  **Sitemap**  **No**

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.
-  **Google Preview**   **[Pemerintah Kabupaten Lampung Tengah](https://web.lampungtenghkab.go.id/)  
<https://web.lampungtenghkab.go.id/>  
Situs Resmi Pemerintah Kabupaten Lampung Tengah**

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

✔ Title  Pemerintah Kabupaten Lampung Tengah  
**Length:** 35 Character(s)

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

✔ Meta Description  Situs Resmi Pemerintah Kabupaten Lampung Tengah  
**Length:** 47 Character(s)

Description tag is one of the most important elements shown to the users for the typed query. The Meta description is presented as a snippet of your content. It tells your potential visitors what kind of information they can find on your web page.

✔ Heading Tags 

	H1	H2	H3	H4	H5	H6
	0	0	0	0	10	0

[View more](#)

Heading Tags are used in order to provide your visitors with a clear view about the content's importance.

! Image  We have found total 91 Image alt attribute for 79 image(s) is missing. [View more](#)

Alternative text describes your images so they can appear in Google™ Images search results also be cached by the Search Engine bot as they cannot read images.

✘ Text to HTML  5.40%

The text and HTML ratio of your website should be ideally 25 to 75 percent.

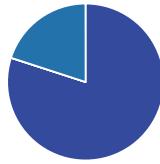

✔ Flash  No

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

✔ Iframe  No

Avoid frames whenever possible and use a NoFrame tags if you must use them.

We found a total of 50 link(s)

### Page Links

External Links: doFollow (80.00%)

External Links: noFollow (0.00%)

Internal Links : (20.00%)

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

### Favicon

Favicon Found

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

### Print CSS

No

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

### Open Graph

Yes

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

### W3C Validation

No

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

SSL Enabled

Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

✔ WWW Resolved ⚙️ ⚙️ ⚙️ Perfect, WWW is Resolving.

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.

✔ Ip Canonicalization ⚙️ ⚙️ Yes

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.

⊖ Robots.txt ⚙️ *Missing*

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.

⚠ Sitemap ⚙️ No

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.

✔ Title ⚙️ ⚙️ **Pemkab Lampung Selatan - Lamsel Bisa**  
**Length: 36 Character(s)**

Title Tags are used to define the content of the website. It briefly tells users, as well as search engines, what the page is about. Your title should contain between 10 and 70 characters (spaces included).

	H1	H2	H3	H4	H5	H6
 <b>Heading Tags</b>  	0	21	0	13	0	0
	<a href="#">View more</a>					

Heading Tags are used in order to provide your visitors with a clear view about the content's importance.

 <b>Image</b>  	<p>We have found total 40 Image alt attribute for 37 image(s) is missing. <a href="#">View more</a></p>
---	---

Alternative text describes your images so they can appear in Google™ Images search results also be cached by the Search Engine bot as they cannot read images.

 <b>Text to HTML</b>   	5.07%
--	-------

The text and HTML ratio of your website should be ideally 25 to 75 percent.

 <b>Flash</b>   	No
---	----

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

 <b>Iframe</b>  	Yes
--	-----

Avoid frames whenever possible and use a NoFrame tags if you must use them.

We found a total of 128 link(s)

Page Links 

External Links: doFollow (12.50%)   
External Links: noFollow (0.00%)   
Internal Links : (87.50%) 

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

Favicon   Favicon Found

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

Print CSS  Yes

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

Open Graph  No

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

W3C Validation  No

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

SSL Enabled

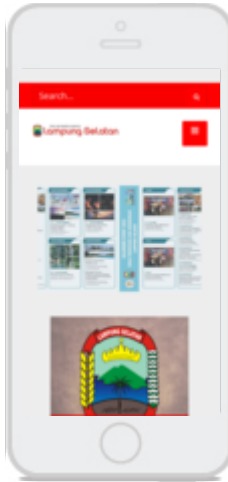

Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.
