The technique used in this sampling is to use Purposive Sampling technique. The analytical method used is quantitative including Validity Test, Reliability Test, Classical Assumption Test, Multiple Linear Regression and hypothesis testing, namely the t test and F test, while the data processing uses SPSS For windows version 20. The results of this study indicate the promotion variable (X1) has a t count ( $5,050 > 1,660$ ), with a sig.t level of  $0.00 < 0.05$  meaning that there is a positive influence between the Promotional Variable (X1) on Shopee Consumer Satisfaction (Y), while the Brand Image Variable (X2) has a t count ( $3,990 > 1,660$ ) with a sig.t level of  $0.000 < 0.005$  meaning that there is a positive influence between Brand Image Variable (X2) on Consumer Satisfaction (Y). The results of the F test count are  $(66,482 > 3.08)$ , with a sig F level of  $0.000 < 0.05$ , then  $H_0$  is rejected and  $H_a$  is accepted, meaning that Promotion and Brand Image together have a positive effect on Shopee Consumer Satisfaction. The coefficient of determination or R Square is 0.471 or 47.1%, which means that consumer satisfaction is influenced by promotion and brand image, while the remaining 46.9% is influenced by other invoices not discussed in the study.
