

## ABSTRACT

### **THE EFFECT OF COMPETITION IN E-PROCUREMENT ON THE VALUE OF THE WINNING BID ON GOVERNMENT EXPENDITURE (AN EMPIRICAL STUDY ON ELECTRONIC PROCUREMENT SERVICES BANDAR LAMPUNG CITY)**

**By:  
AFIFAH ADILAH**

The purpose of this research was to empirically find out the effect of the number of tender participants, the value of the tender work, and the length of time of the tender work on the bid value of government expenditure. The type of data used in this research was secondary data. The data was collected through the documentation method, namely using the Bandar Lampung city procurement service website. The data analysis method used in this research was quantitative data analysis expressed in numbers using statistical method calculations assisted by the SPSS vers.25 statistical data processing program. The results of this research found that (1) The number of Tender Participants had a significant effect on the Value of the Winning bid. (2) The value of the tender work had a significant effect on the value of the winning bid. (3) The length of work time had a significant effect on the value of the winning bid

Keywords: E-Procurement and Winning Bid Value.
