ABSTRACT

DESIGN AND BUILD LEARNING MEDIA APPLICATIONS
HEALTHY MENU FOR TODDLERS
MULTIMEDIA-BASED

By

RUDI YULIANTO

A learning media application is a series of activities or commands executed by a computer program that is created as a medium for learning. The importance of a healthy and nutritious menu for the health of the toddler's body has a great influence on the growth and development of toddlers, both physical development and brain intelligence.

The design of this application aims to analyze the need for an application that is able to provide information quickly and with a wide range, as well as to assist parents in providing nutritious food to their toddlers. This learning media application is designed using a prototype method which has three stages, namely needs collection, design, and prototype evaluation.

This research produced a multimedia-based healthy menu learning media application for toddlers that can be used as an information medium in

KEYWORDS: LEARNING MEDIA APPLICATION, PROTOTYPE, TODDLER HEALTHY MENU.
