

## **BAB III**

### **METODE PENELITIAN**

#### **3.1 Metode Pengumpulan Data**

Dalam menyusun penelitian ini, diperlukan data-data informasi yang relative lengkap sebagai bahan yang mendukung kebenaran materi pembahasan sehingga dilakukan pengumpulan data untuk mendapatkan informasi atau materi yang diperlukan. Informasi tersebut dibutuhkan dalam rangka untuk mencapai tujuan penelitian. Adapun metode pengumpulan data dalam penelitian ini dapat dijabarkan sebagai berikut :

##### **3.1.1 Wawancara**

Metode yang pertama melalui wawancara yang dilakukan dengan melibatkan para driver ojek online yang berada disekitar Bandar Lampung, dalam hal ini wawancara melibatkan langsung para driver ojek online demi mendapatkan data yang akurat.

##### **3.1.2 Study Pustaka**

Studi pustaka dilakukan demi mendapatkan data tentang penelitian yang berguna untuk bahan analisis dengan cara mengumpulkan literature yang bersumber dari jurnal, buku pakar ataupun dari hasil penelitian orang lain.

##### **3.1.3 Observasi**

Metode pengumpulan data melalui observasi kali dilakukan dengan beberapa cara, yaitu dengan mendatangi langsung tempat pangkalan ojek online yang berada disekitar area Bandar Lampung untuk menilai keadaan secara langsung serta melakukan observasi langsung sebagai pelanggan ojek online

## 3.2 Analisis Sistem

Proses pengumpulan kebutuhan dilakukan secara intensif untuk menspesifikasikan kebutuhan system dan perangkat lunak agar dapat sesuai dengan harapan peneliti. Spesifikasi kebutuhan yang diperlukan system dan perangkat lunak pada tahap ini antara lain:

### 3.2.1 Analisis kebutuhan input

Studi kasus:

Dalam kehidupan di era yang serba digital saat ini, smartphone menjadi salah satu teknologi yang penting dimiliki oleh setiap orang, beberapa pekerjaan bahkan mengharuskan untuk memiliki smartphone. Salah satunya adalah Driver ojek online, Driver ojek online membutuhkan smartphone untuk mendapatkan pesanan maupun pelanggan. Input yang dibutuhkan dalam proses mendapatkan rekomendasi smartphone untuk para driver ojek online akan dilakukan dengan kriteria yang sudah ditentukan. Variable kriteria yang digunakan adalah Harga, Ram, Rom, Kapasitas Baterai, Layar, Chipset, Network Teknologi, Kecerahan Layar, dan Kamera.

### 3.2.2 Analisis Kebutuhan Output

Output yang dihasilkan dari penelitian ini adalah sebuah system yang memberikan sebuah rekomendasi smartphone kepada driver ojek online, rekomendasi diberikan berdasarkan variable kriteria yang sudah ditentukan dan akan mendapatkan nilai dari yang tertinggi yaitu yang sangat rekomendasi hingga nilai terendah yang kurang rekomendasi. Sehingga driver ojek online tidak kesulitan dalam menentukan smartphone yang akan mereka gunakan untuk pekerjaan mereka.

### 3.2.3 Spesifikasi Smartphone

Setelah melakukan pengumpulan data melalui Studi kasus dan wawancara langsung, maka ditetapkan beberapa smartphone yang cocok untuk driver ojek online. Beberapa smartphone yang digunakan dalam penelitian kali ini beserta kriteria nya adalah sebagai berikut:

1. Oppo A12

|                    |                             |

### 3.3 Metode Pengembangan Perangkat Lunak

Pada tahap pengembangan sisten perangkat penelitian ini menggunakan metode pengembangan system Prototype yang dibagi menjadi beberapa tahap yaitu:

#### 3.3.1 Communication

Dalam rangka proses perancangan aplikasi rekomendasi smartphone maka perlu dilakukan proses pengumpulan data, pengumpulan data dilakukan untuk mendapatkan informasi secara benar dan tepat dengan langsung dari sumber informasi atau mengambil informasi dari referensi data yang terpercaya.

#### 3.3.2 Requirements Gathering and Analysis (Analisis Kebutuhan)

Analisa dilakukan dengan cara mengumpulkan data – data informasi yang dibutuhkan untuk pembuatan aplikasi edukasi kekerasan seksual. Berikut beberapa kebutuhan yang diperlukan untuk pembuatan aplikasi:

##### 3.3.2.1. Kebutuhan Perangkat Keras

| No. | Perangkat | Spesifikasi                 |
|-----|-----------|-----------------------------|
| 1.  | Laptop    | Asus                        |
| 2.  | RAM       | 8GB                         |
| 3.  | Processor | Intel Core i3-6006LJ 2.0GHz |
| 4.  | Harddisk  | 500GB                       |
| 5.  | Pendukung | <i>Mouse, Keyboard</i>      |

##### 3.3.2.2. Kebutuhan Perangkat Lunak

| No. | Perangkat Lunak | Keterangan                |
|-----|-----------------|---------------------------|
| 1.  | Windows 10      | Aplikasi Operasi          |
| 2.  | Android Studio  | Pembuatan Aplikasi Mobile |

|    |             |                    |
|----|-------------|--------------------|
| 3. | CorelDraw   | Design             |
| 4. | Dokumentasi | Microsoft Word     |
| 5. | Star UML    | Use Case Diagram   |
| 6  | Kotlin      | Bahasa Pemrograman |

### 3.3.3 Quick Design (Desain cepat)

Perancangan dilakukan dengan melihat pada kebutuhan fungsional yang sudah dirancang untuk pembuatan suatu sistem. Dalam perancangan ini akan dijelaskan menggunakan pemodelan berorientasi objek dengan UML. Perancangan desain pada penelitian ini terdiri dari Use Case, Activity Diagram, Struktur Database serta user interface.

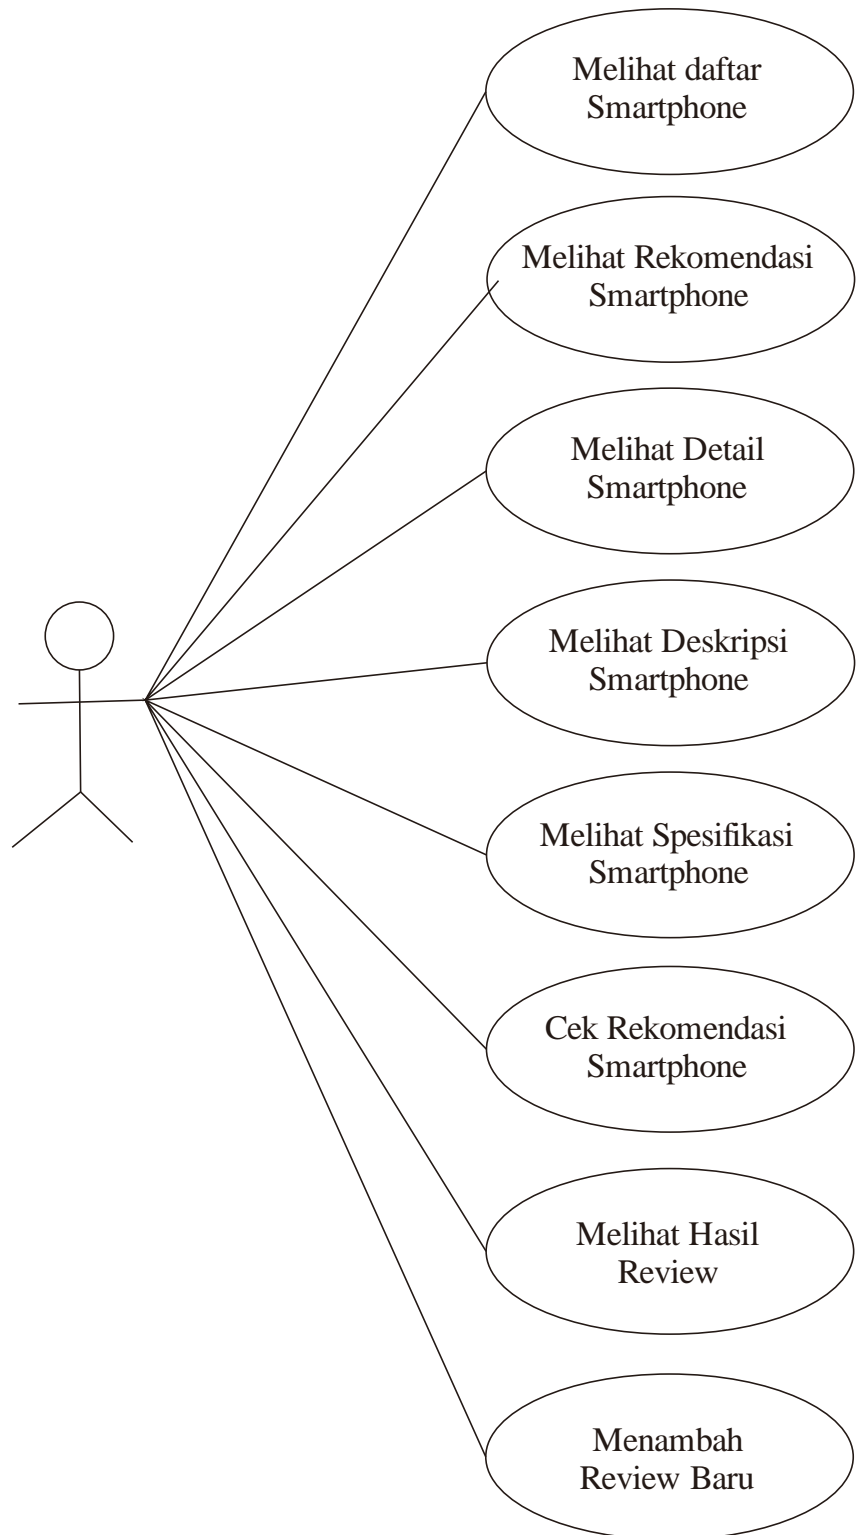

## 3.4 Pemodelan Desain

Dalam tahap ini akan dibuat perancangan menggunakan pemodelan Unified Modelling Language (UML) yang terdiri dari perancangan Use Case Diagram, Rancangan Activity Diagram, Struktur Database dan Desain Interface. Dengan adanya perancangan sistem ini, dapat membantu peneliti dalam membangun aplikasi yang sesuai dengan tujuan penelitian.

### 3.4.1 Use Case Diagram

Use case diagram adalah satu dari berbagai jenis diagram UML (Unified Modelling Language) yang menggambarkan hubungan interaksi antara sistem dan aktor. Use Case dapat mendeskripsikan tipe interaksi antara si pengguna sistem dengan sistemnya.

### 3.4.1.1 Diagram Use Case

**gambar 1 Diagram Use Case**

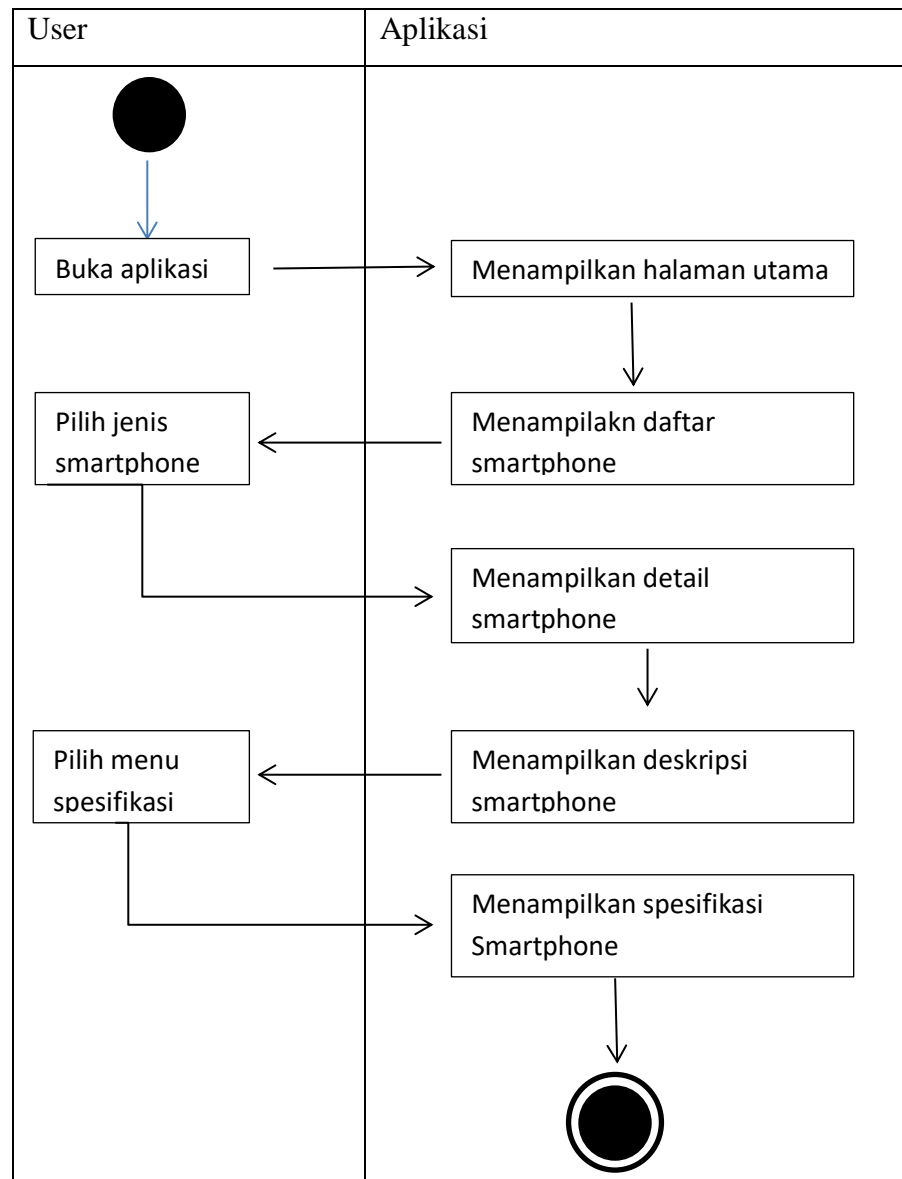

### 3.4.1.2 Definisi Use Case

|                                 |  |
|---------------------------------|--|
| Melihat daftar smartphone       | Menampilkan halaman daftar smartphone, seluruh smartphone ditampilkan berurutan sesuai merk dari smartphone  |
| Melihat rekomendasi smartphone  | Menampilkan halaman rekomendasi smartphone, seluruh smartphone ditampilkan berurutan sesuai dari rating yang telah didapatkan melalui metode SMART   |
| Melihat detail smartphone       | Menampilkan detail dari smartphone, detail yang ditampilkan berupa nama, harga, rating, serta menampilkan button review, back dan direct menuju toko online shop   |
| Melihat deskripsi smartphone    | Menampilkan deskripsi dari smartphone  |
| Melihat spesifikasi smartphone  | Menampilkan spesifikasi dari smartphone secara lengkap mulai dari baterai sampe spesifikasi kamera depan maupun belakang   |
| Cek rekomendasi smartphone      | User dapat mengecek rekomendasi smartphone sesuai input yang dimasukan, input tersebut berupa merk smartphone beserta harga smartphone, dan system akan memberikan rekomendasi yang sesuai dengan input yang dimasukan |
| Melihat hasil review smartphone | Menampilkan hasil review smartphone  |
| Menambah review baru smartphone | Menambahkan riview baru terhadap smartphone  |

### 3.4.3 Struktur Database

Berikut ini adalah Struktur database yang digunakan dalam aplikasi rekomendasi smartphone untuk ojek online dengan detail sebagai berikut:

Nama Database : Rekomendasi\_Smartphone

Nama Tabel : User\_Review

Fungsi : menyimpan data user review

Primary Key : id\_review

| No | Field        | Type    | Length | Contant     |

#### 3.4.4 Desain Interface

Desain adalah tahap merancang tampilan (Interface) aplikasi dan kebutuhan atau bahan yang dibutuhkan untuk membuat sistem tersebut. Adapun Desain Interface pada aplikasi system pemilihan jenis smartphone untuk ojek online sebagai berikut :

##### 3.4.4.1. Rancangan tampilan awal (menu list smartphone)

Tampilan awal setelah aplikasi dibuka akan menampilkan daftar smartphone yang tampilkan sesuai merk smartphone.

**gambar 6 Rancangan List Smartphone**

Penjelasan item :

- Image view : image view akan menampilkan gambar dari smartphone sesuai nama smartphone.
- Text view : text view akan menampilkan nama dari smartphone.
- Menu 1 : menu 1 akan menampilkan smartphone secara berurutan sesuai dengan merknya.

#### 3.4.4.2. Rancangan tampilan detail smartphone

Pada rancangan detail smartphone akan menampilkan detail dari smartphone, yang terdiri dari nama smartphpne, harga, rating, serta deskripsi dari smartphone.

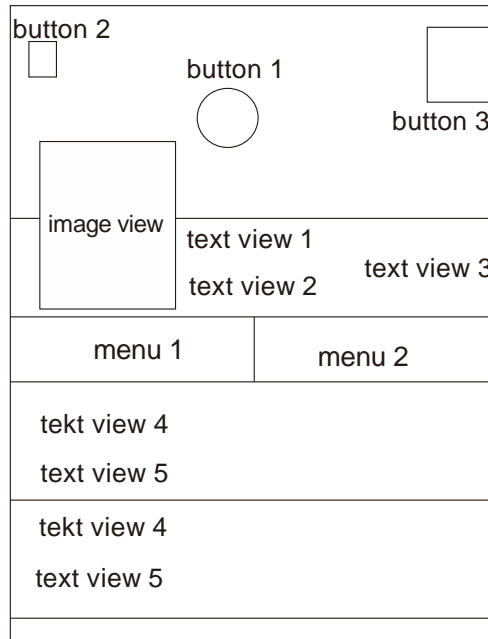

**gambar 7 Rancangan Detail smartphone**

Penjelasan item :

- Image view : image view akan menampilkan gambar dari smartphone
- Button 1 : button 1 yaitu tombol untuk langsung menuju tempat store penjualan smartphone
- Button 2 : button 2 yaitu tombol untuk kembali kehalaman utama
- Button 3 : button 3 yaitu tombol untuk melihat halaman review
- Text view 1: text view 1 akan menampilkan nama dari smartphone.
- Text view 2 : text view 2 akan menampilkan harga dari smartphone.
- Text view 3: text view 3 akan menampilkan rating dari smartphone. .
- Text view 4:text view 4 akan menampilkan deskripsi dari smartphone.
- Menu 1 : menu 1 akan menampilkan deskripsi smartphone
- Menu 2 : menu 2 akan menampilkan spesifikasi smartphone

#### 3.4.4.3. Rancangan tampilan spesifikasi smartphone

Pada rancangan tampilan spesifikasi smartphone akan menampilkan spesifikasi dari masing-masing smartphone.

**gambar 8 Rancangan Spesifikasi Smartphone**

Penjelasan item :

- Image view : image view akan menampilkan gambar dari smartphone
- Button 1 : button 1 yaitu tombol untuk langsung menuju tempat store penjualan smartphone.
- Button 2 : button 2 yaitu tombol untuk kembali kehalaman utama.
- Button 3 : button 3 yaitu tombol untuk melihat halaman review.
- Text view 1: text view 1 akan menampilkan nama dari smartphone.
- Text view 2 : text view 2 akan menampilkan harga dari smartphone.
- Text view 3: text view 3 akan menampilkan rating dari smartphone.
- Text view 4 : text view 4 akan menampilkan nama spesifikasi dari smartphone.
- Text view 5: text view 5 akan menampilkan spesifikasi yang digunakan oleh smartphone.
- Menu 1 : menu 1 akan menampilkan deskripsi smartphone.
- Menu 2 : menu 2 akan menampilkan spesifikasi smartphone.

#### 3.4.4.4. Rancangan Halaman Rekomendasi Smartphone

Pada halaman ini akan menampilkan Rekomendasi smartphone sesuai Rating dari yang terbesar.

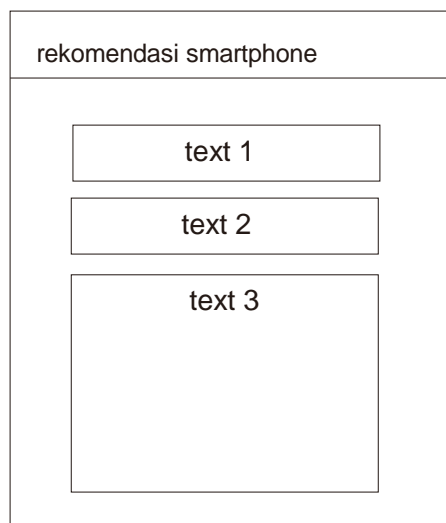

**gambar 9 Rancangan Rekomendasi smartphone**

Penjelasan item :

- Image view 1 : image view 1 akan menampilkan gambar smartphone.
- Text 1: text 1 yaitu akan menampilkan urutan ranking smartphone.
- Text 2: text 2 yaitu akan menampilkan nama dan jenis smartphone.
- Text 3: text 3 yaitu akan menampilkan rating smartphone.
- Text 4: text 4 yaitu akan menampilkan harga smartphone.

#### 3.4.4.5. Rancangan halaman detail rekomendasi smartphone

Pada halaman ini akan menampilkan detail dari rekomendasi smartphone pada menu kedua.

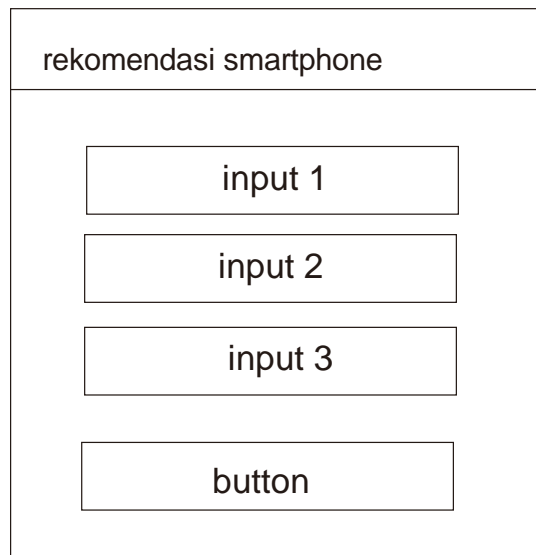

**gambar 10 Rancangan Detail Rekomendasi Smartphone**

Penjelasan item :

- Text 1: text 1 yaitu akan menampilkan nama dan rating smartphone.
- Text 2: text 2 yaitu akan menampilkan harga smartphone.
- Text 3: text 3 yaitu akan menampilkan spesifikasi smartphone.

#### 3.4.4.6. Rancangan tampilan menu cek rekomendasi smartphone

Pada rancangan menu cek user dapat memilih kriteria yang diinginkan dan akan mendapatkan rekomendasi sesuai dengan pilihan tersebut, user dapat memasukkan kriteria merk smartphone yang diinginkan beserta harganya, dan system akan memberikan smartphone dengan rating tertinggi sesuai input user.

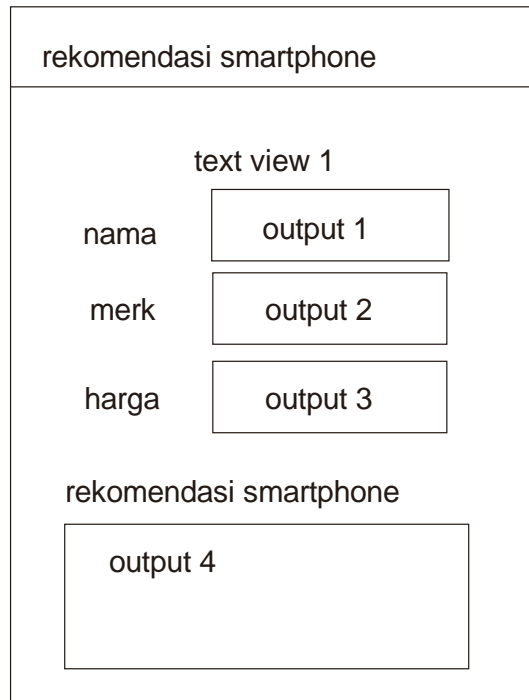

**gambar 11 Rancangan Tampilan menu cek rekomendasi smartphone**

Penjelasan item :

- Text view 1 : text view 1 akan menampilkan menu cek smartphone.
- Input 1: input 1 yaitu user akan mengisi kan input nama user.
- Input 2: input 2 yaitu user akan mengisi kan merk smartphone.
- Input 3: input 3 yaitu user akan mengisi kan harga smartphone.
- Button 1: button 1 yaitu tombol untuk memproses input yang telah diisi oleh user.

#### 3.4.4.7. Rancangan tampilan hasil cek rekomendasi smartphone

Pada tampilan hasil cek smartphone user akan mendapatkan output berupa rekomendasi smartphone dengan rating tertinggi sesuai input yang dimasukkan.

**gambar 12 Rancangan hasil cek rekomendasi smartphone**

Penjelasan item :

- Text view 1 : text view 1 akan menampilkan menu hasil cek smartphone.
- Output 1: output 1 yaitu akan menampilkan nama user.
- Output 2: output 2 yaitu akan menampilkan merk smartphone.
- Output 3: output 3 yaitu akan menampilkan harga smartphone.
- Output 4: output 4 yaitu akan memberikan hasil rekomendasi smartphone sesuai input yang telah diberikan

#### 3.4.4.8. Rancangan tampilan menu review smartphone

Pada tampilan review smartphone user dapat melihat review yang telah diberikan terhadap suatu smartphone, user juga dapat menambahkan review nya sendiri terhadap suatu smartphone.

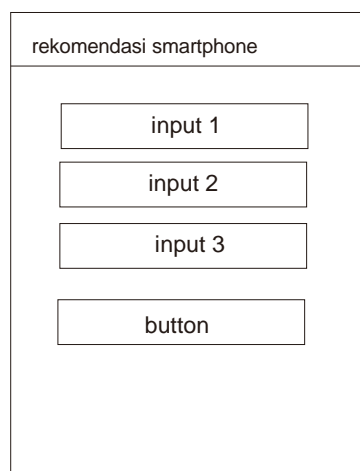

**gambar 13 Rancangan Menu Review smartphone**

Penjelasan item :

- Text view 1 : text view 1 akan menampilkan nama user review.
- Text view 2 : text view 2 akan menampilkan merk smartphone.
- Text view 3 : text view 3 akan menampilkan harga smartphone.
- Button 2 : button 2 yaitu untuk menambah review baru.

#### 3.4.4.9. Rancangan tampilan tambah review smartphone

Pada tampilan tambah review user dapat menambahkan review kedalam database dengan memasukan input nama, jenis smartphone, dan hasil ulasan atau review.

**gambar 14 Rancangan Menu Tambah Review smartphone**

#### Penjelasan Item

- Input 1 : input 1 yaitu user akan mengisi data nama user review.
- Input 2 : input 2 yaitu user akan mengisi merk smartphone.
- Input 3 : input 3 yaitu user akan mengisi review smartphone.
- Button : button yaitu tombol untuk menambah review

### 3.5 Implementasi Metode SMART

Menurut Goodwin dan Wright ada beberapa langkah untuk menganalisa metode SMART seperti berikut ini:

1. Menentukan kriteria untuk setiap alternatif.
2. Menentukan bobot setiap kriteria dengan menggunakan interval 1-100 untuk masing-masing kriteria dengan prioritas terpenting.
3. Hitung Normalisasi Setiap Bobot Kriteria, dengan membandingkan nilai bobot kriteria dengan jumlah bobot kriteria, menggunakan rumus berikut ini:

$$Nb = \frac{Bk}{\sum Bk}$$

4. Menentukan nilai setiap kriteria.
5. Menentukan nilai utility dengan mengonversikan nilai kriteria pada setiap kriteria, pada metode SMART utility memiliki sifat dapat dilihat pada kepentingan kriteria tersebut, Kriteria yang bersifat “lebih diinginkan nilai yang lebih besar” maka untuk itu menggunakan rumus berikut ini:  $Uk = 100 \times \frac{Ci - Cmin}{Cmax - Cmin}$
6. Menentukan nilai akhir analisa metode SMART dengan mengalikan nilai bobot kriteria dari data data baku dengan nilai normalisasi kriteria dari data baku. (Goodwin, P., & Wright, G. 2009)

#### 3.5.1 Identifikasi Alternatif

Dalam proses identifikasi alternatif dilakukan pengumpulan data smartphone dan didapat sebanyak 20 alternatif, yang dapat dilihat pada table 25

|     | Smartphone          | Merk    | Harga     |
|-----|---------------------|---------|-----------|
| A1  | Oppo A12            | OPPO    | 1.709.000 |
| A2  | Oppo A16K           | OPPO    | 2.199.000 |
| A3  | Oppo A52            | OPPO    | 2.499.000 |
| A4  | Oppo F11            | OPPO    | 1.469.000 |
| A5  | Samsung Galaxy A02s | SAMSUNG | 1.790.000 |
| A6  | Samsung Galaxy M12  | SAMSUNG | 1.885.000 |
| A7  | Samsung Galaxy A13  | SAMSUNG | 2.270.000 |
| A8  | Samsung Galaxy A03s | SAMSUNG | 1.645.000 |
| A9  | Redmi 9T            | REDMI   | 2.465.000 |
| A10 | Redmi 9C            | REDMI   | 1.679.000 |
| A11 | Redmi Note 9        | REDMI   | 2.399.000 |
| A12 | Redmi Note 8        | REDMI   | 1.800.000 |
| A13 | Realme C21          | REALME  | 1.710.000 |
| A14 | Realme C15          | REALME  | 1.849.000 |
| A15 | Realme 5            | REALME  | 2.050.000 |
| A16 | Realme Narzo 30A    | REALME  | 2.139.000 |
| A17 | Vivo Y12            | VIVO    | 1.719.000 |
| A18 | Vivo Y20            | VIVO    | 1.809.000 |
| A19 | Infinix Hot 9       | INFINIX | 1.899.000 |
| A20 | Intfinix S5 Lite    | INFINIX | 1.800.000 |

### 3.5.2 Menentukan bobot kriteria dan nilai normalisasi bobot kriteria

| Kriteria | keterangan | Bobot Kriteria (Bk) | Nilai Normalisasi (Nb) |
|----------|------------|---------------------|------------------------|
| C1       | Harga      | 20%                 | 0,2                    |
| C2       | Baterai    | 15%                 | 0,15                   |
| C3       | ROM        | 10%                 | 0,1                    |
| C4       | RAM        | 10%                 | 0,1                    |

|       |                    |      |      |
|-------|--------------------|------|------|
| C5    | Network Technology | 5%   | 0.05 |
| C6    | Kecerahan Layar    | 10%  | 0,1  |
| C7    | Chipset            | 15%  | 0,15 |
| C8    | Layar              | 5%   | 0,05 |

### 3.5.3 Menentukan nilai setiap kriteria

#### 1. Kriteria harga

Kriteria ini dapat dilihat dari aspek tingkat kemahalan harga sebuah smartphone yang disediakan berdasarkan pada tipe smartphone.

| Kriteria            | Parameter           | Nilai |
|---------------------|---------------------|-------|
| Harga               | 1.450.000-1.499.999 | 90    |
|                     | 1.600.000-1.649.999 | 85    |
|                     | 1.650.000-1.699.999 | 80    |
|                     | 1.700.000-1.749.999 | 75    |
|                     | 1.750.000-1.799.999 | 70    |
|                     | 1.800.000-1.849.999 | 65    |
|                     | 1.850.000-1.899.999 | 60    |
|                     | 2.050.000-2.059.999 | 55    |
|                     | 2.100.000-2.149.999 | 50    |
|                     | 2.150.000-2.199.999 | 45    |
|                     | 2.250.000-2.299.999 | 40    |
|                     | 2.350.000-2.399.999 | 35    |
| 2.450.000-2.499.999 | 30                  |       |

**Table 34 kriteria harga**

## 2. Kriteria Baterai

Kriteria ini dapat dilihat dari seberapa besar kapasitas baterai yang dimiliki sebuah smartphone, semakin besar kapasitas baterai semakin lama smartphone dapat digunakan.

| Kriteria | Parameter | Nilai |
|----------|-----------|-------|
| Baterai  | 4.000 mAh | 60    |
|          | 4.020 mAh | 62    |
|          | 4.230 mAh | 65    |
|          | 5.000 mAh | 75    |
|          | 5.020 mAh | 77    |
|          | 6.000 mAh | 90    |

Table 35 kriteria baterai

## 3. Kriteria Penyimpanan Internal

Kriteria ini dapat dilihat dari seberapa besar penyimpanan dari sebuah smartphone, kriteria ini digunakan untuk menyimpan data aplikasi yang dibutuhkan atau data pribadi.

| Kriteria | Parameter | Nilai |
|----------|-----------|-------|
| ROM      | 32 GB     | 50    |
|          | 64 GB     | 70    |
|          | 128 GB    | 90    |

## 4. Kriteria RAM

| Kriteria | Parameter | Nilai |
|----------|-----------|-------|
| RAM      | 3 GB      | 50    |
|          | 4 GB      | 70    |
|          | 6 GB      | 90    |

Table 37 kriteria RAM

### 5. Kriteria Network Technology

Kriteria ini digunakan untuk melihat apakah sebuah smartphone sudah mendukung jaringan 4G dan 5G, serta melihat apakah support dual SIM atau tidak.

| Kriteria           | Parameter            | Nilai |
|--------------------|----------------------|-------|
| Network Technology | 2G/3G/4G, Single SIM | 50    |
|                    | 2G/3G/4G, Dual SIM   | 90    |

Table 38 kriteria network teknologi

### 6. Kriteria Kecerahan Layar

Kriteria ini digunakan untuk melihat kecerahan layar dari suatu smartphone, kecerahan layar dapat berguna ketika sedang menggunakan smartphone dibawah cahaya matahari

| Kriteria        | Parameter | Nilai |
|-----------------|-----------|-------|
| Kecerahan Layar | 400 Nits  | 50    |
|                 | 440 Nits  | 60    |
|                 | 450 Nits  | 65    |
|                 | 470 Nits  | 70    |
|                 | 480 Nits  | 75    |
|                 | 482 Nits  | 80    |
|                 | 500 Nits  | 90    |

### 7. Kriteria Chipset

| Kriteria | Parameter               | Nilai |
|----------|-------------------------|-------|
| Chipset  | Mediatek Helio G85      | 90    |
|          | Qualcomm Snapdragon 665 | 80    |
|          | Qualcomm Snapdragon 662 | 78    |
|          | Mediatek Helio P70      | 76    |
|          | Qualcomm Snapdragon 460 | 74    |
|          | Exynos 850              | 70    |

|  |                         |    |
|--|-------------------------|----|
|  | Mediatek Helio P35      | 62 |
|  | Mediatek Helio G35      | 60 |
|  | Mediatek Helio A25      | 55 |
|  | Mediatek Helio P22      | 45 |
|  | Qualcomm Snapdragon 450 | 40 |

### 3.5.5 Nilai utility setiap kriteria

Langkah selanjutnya menentukan nilai utility, kemudian dibuat sub kriterianya sebagai alternatif dengan rumus sebagai berikut:

$$U_k = 100 \times \frac{C_i - C_{min}}{C_{max} - C_{min}}$$

$U_k$  = Nilai Utility

$C_i$  = Nilai Kriteria ke 1 dan seterusnya

$C_{min}$  = Nilai terendah dari kriteria ke 1 dan seterusnya

$C_{max}$  = Nilai terbesar dari kriteria ke 1 dan seterusnya

1. Menghitung nilai utility Oppo A12

Harga

$$\begin{aligned} C1 &= 75 \\ C_{in} &= 30 \\ C_{max} &= 90 \end{aligned}$$

$$\begin{aligned} Uk &= 100 \times \frac{75-30}{90-30} \\ Uk &= 100 \times 0,75 \\ Uk &= 75 \end{aligned}$$

Baterai

$$\begin{aligned} C2 &= 65 \\ C_{min} &= 60 \\ C_{max} &= 90 \end{aligned}$$

$$\begin{aligned} Uk &= 100 \times \frac{65-60}{90-60} \\ Uk &= 100 \times 0,167 \\ Uk &= 16,7 \end{aligned}$$

ROM

$$\begin{aligned} C3 &= 70 \\ C_{min} &= 50 \\ C_{max} &= 90 \end{aligned}$$

$$\begin{aligned} Uk &= 100 \times \frac{70-50}{90-50} \\ k &= 100 \times 0,5 \\ Uk &= 50 \end{aligned}$$

RAM

$$\begin{aligned} C4 &= 70 \\ C_{min} &= 50 \\ C_{max} &= 90 \end{aligned}$$

$$\begin{aligned} Uk &= 100 \times \frac{70-50}{90-50} \\ Uk &= 100 \times 0,5 \\ Uk &= 50 \end{aligned}$$

Network Teknology

### 3.5.6 Menentukan nilai akhir analisa metode SMART

Menentukan nilai akhir analisa metode SMART dengan mengalikan nilai yang didapat dari normalisasi nilai bobot kriteria dari data data baku dengan nilai utility kriteria dari data baku. Kemudian jumlahkan nilai dari perkalian menggunakan rumus berikut ini:

$$N_{ta} = N_b \times U_k$$

$$N_{ta} = \text{Nilai akhir} / \text{Nilai total alternatif}$$

$$N_b = \text{Normalisasi Bobot}$$

$U_k = \text{Nilai Utulity}$
