ABSTRACT

Balinese script is one of the Indonesian traditional scripts that developed in Bali. The oldest root of the Balinese script is the Indian Brahmi script which developed into the Pallawa script in South and Southeast Asia. The use of Balinese script has begun to be neglected because the people themselves have used standard Indonesian characters in everyday life and Balinese who can speak Balinese mostly do not understand the Balinese language and script.

In developing the proposed system, this study used the prototype method. The prototype method was a methodology commonly used in object-oriented application or system development. The application used to construct 2 namely Google Chrome and firebase as the database.

The result of this study stated that the character recognition application is expected to help in learning Balinese script which was able to be used as a learning medium that is useful for students, students, and the general public.

Keywords: Aksara Introduction, Balinese script, Android
